MUHAMMAD USMAN JAVED

Senior iOS Engineer | Swift, SwiftUI & UIKit

Lahore, Pakistan (UTC+5) · Remote / Relocation
usmaniverse@gmail.com | +92 321 945 9630 | linkedin.com/in/usmaniverse | usmaniverse.online

SUMMARY

iOS engineer focused on modernizing and scaling consumer apps. At Jeeny, took a legacy Objective-C ride-hailing app handling ~1M ride requests a day across Saudi Arabia and Jordan to Swift and a modular MVVM architecture, then led the 10-person squad that shipped on it. Before that, moved Zameen.com and Bayut.com from Objective-C to Swift at Dubizzle Labs. Works across SwiftUI and UIKit, Combine and async/await, automated testing and App Store releases, and is comfortable on the backend with Java and Spring Boot.

CORE SKILLS

iOS: Swift, SwiftUI, UIKit, Objective-C, Combine, async/await, Core Data, Core Location, CoreAnimation

Architecture: MVVM, Clean Architecture (VIP), Modularization (Swift Package Manager, CocoaPods), SOLID

Testing & Quality: XCTest, XCUITest, Instruments, Firebase Crashlytics, SwiftLint, Code Review

APIs & Delivery: REST/JSON, URLSession, Alamofire, Firebase, CI/CD (GitHub Actions, Xcode Cloud, Fastlane), TestFlight & App Store

Also: Java & Spring Boot, AI-assisted development (Cursor, Claude), Agile/Scrum, Technical Leadership & Mentoring

WORK EXPERIENCE

Principal iOS Engineer → iOS Team Lead — Jeeny

Feb 2022 – Sep 2026 · Lahore, Pakistan / Remote (KSA)

- Rebuilt Jeeny's legacy Objective-C/MVC app in Swift with MVVM and Swift Package Manager modules, cutting feature build times by ~30%.
- Kept crash-free users above 99.5% by making XCTest/XCUITest coverage, Instruments profiling and Crashlytics review part of every release.
- Moved the networking layer to async/await on URLSession and Alamofire, replacing nested callbacks across ride, payment and map services.
- Built live ride tracking and pickup/drop-off matching with Core Location, plus BLE beacon detection for location-triggered features.
- Added Core Data offline caching so riders and drivers could keep using the app on weak connections, and set up Firebase Cloud Messaging and Analytics for push and usage tracking.
- Smoothed scrolling and transitions on the busiest ride and map screens by reducing offscreen rendering and caching CALayer content.
- Took releases from monthly to bi-weekly and lifted sprint delivery from ~65% to ~90% of committed scope while running planning for iOS, Android, backend and QA.
- Cut P1/P2 production incidents by ~35% after introducing release-readiness reviews and a shared on-call rotation.
- Grew the iOS team from 5 to 15 engineers, mentored 3 into senior roles, and halved code-review turnaround with a shared review standard.

Senior Software Engineer, iOS — Dubizzle Labs (formerly EMPG Labs)

Sep 2019 – Jan 2022 · Lahore, Pakistan

- Migrated Zameen.com and Bayut.com, leading property portals in Pakistan and the UAE, from Objective-C/MVC to Swift and VIP Clean Architecture, splitting the monolith into CocoaPods modules teams could ship independently.
- Led the redesign of both apps to Apple's Human Interface Guidelines with Product and Design, lifting the App Store rating from 3.9 to 4.5 and engagement by ~20%.
- Mentored junior engineers through the move to Swift and clean-architecture patterns.

CERTIFICATIONS

- Google Project Management Professional Certificate — Google (Coursera), Aug 2025
- IBM Java Developer Professional Certificate — IBM (Coursera), Aug 2026
- Google AI Professional Certificate — Google (Coursera), Sep 2026

EDUCATION

Bachelor of Engineering, Computer Software Engineering — University of the Punjab
